

Assignment

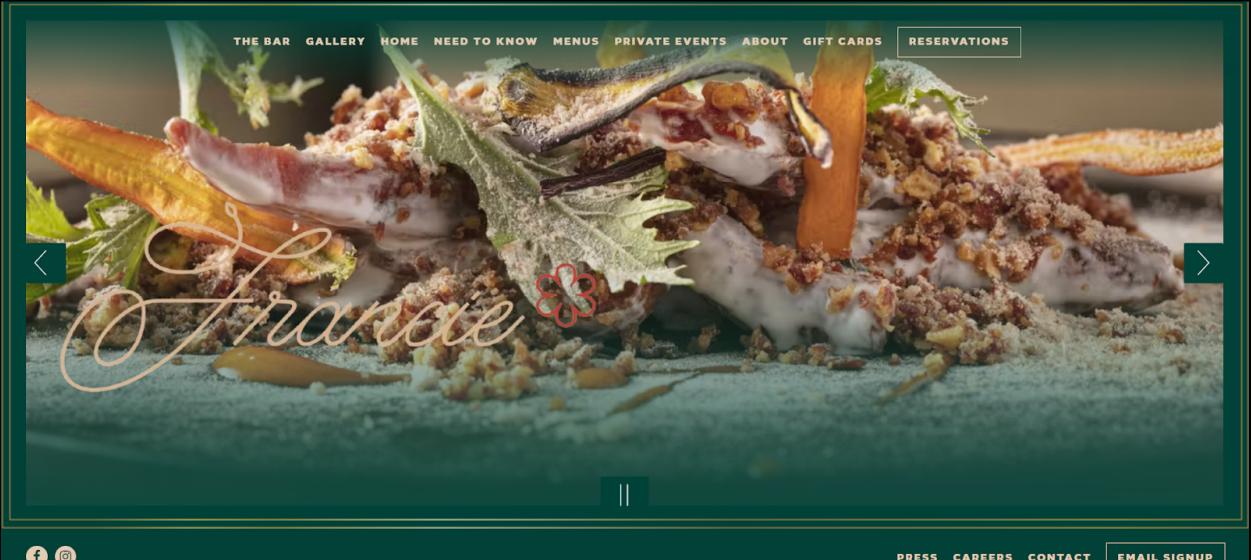

Create a website for a Restaurant. Focus on the design and make it as attractive as possible.

(Use HTML and CSS)

Few references:

The screenshot shows the homepage of The Tailor's Son restaurant. At the top left is the logo "THE Tailor's SON". On the right is a menu icon. Below the logo is a large, centered image of two plates of food and two glasses of red wine on a green surface against a black and white checkered background. There are navigation arrows and a double arrow in the center of the image. At the bottom are social media icons for Facebook and Instagram, and links for ACCESSIBILITY, CONTACT, and EMAIL SIGNUP.

The screenshot shows the homepage of Le Francais restaurant. At the top is a navigation bar with links: THE BAR, GALLERY, HOME, NEED TO KNOW, MENUS, PRIVATE EVENTS, ABOUT, GIFT CARDS, and RESERVATIONS. Below the navigation is a large, close-up image of a dish, possibly a fish or shellfish preparation, garnished with herbs and nuts. Overlaid on the dish is the word "Francais" in a large, elegant script font, with a small red flower icon next to the letter "i". At the bottom are social media icons for Facebook and Instagram, and links for PRESS, CAREERS, CONTACT, and EMAIL SIGNUP.

Create 3 buttons: **Menu**, **Make reservations** & **All reservations**

(Use JS)

1. **Menu button** - When the user clicks on it, another page will appear, with a list of:
 - i. Dish name
 - ii. PriceThe list should be scrollable.
Back button should be present to take the user back to the home page.

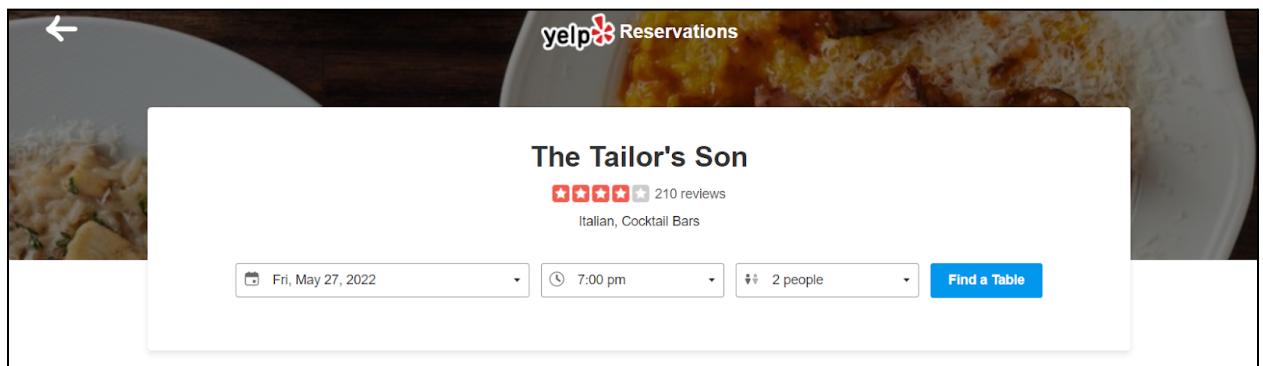

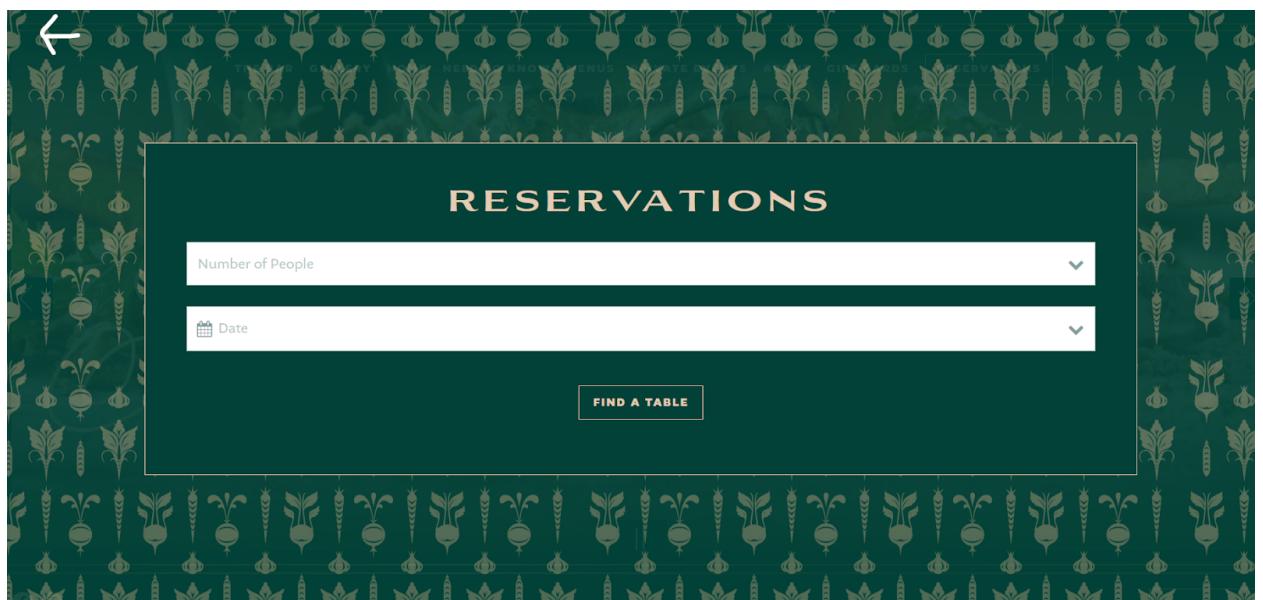

Reference image:

2. **Reservations button** - When a user clicks on it, a form is appeared, to make a booking in the hotel, and when submitted the details are stored in local storage.
The form should have following elements:
 - i. Text box to take **name/email** of the person
 - ii. Date picker to select the **Date** of the reservation
 - iii. Time picker to select the **Time** of the reservation
 - iv. Text box to take **number** of the people
 - v. **Book** button to book the reservation and stored it in the local storage

Back button should be present to take the user back to the home page.

Reference image:

A small, light brown 'X' icon located in the top right corner of the modal window.

3. **All Reservations button** - When a user clicks on it, a modal is opened, showing the reservation data stored in local storage

**#These images are for reference, we expect from you to show your own design but all the mentioned functionality should be there.
You can come up with your design.**
